

LTE / NB-IoT Networks

Some Lobar devices do support mobile connections like NB-IoT or LTE-Cat-M1. This page contains background information and technical details related to the mobile connections.

LTE Signal strength

The signal strength of the LTE-M1 or NB-IoT network can be derived from the **RSRP** and **RSRQ** dimensionless values.

- $RSRP - 140 = \text{dBm}$
- $RSRQ / 2 - 19.5 = \text{dB}$

| Coverage | LTE RSRP | LTERSRP (dBm) | RSRQ | RSRQ (dB) |
|------------------------|------------------------|------------------------------|-------------------------|------------------------------|
| | Average power received | Average power received (dBm) | Average receive quality | Average receive quality (dB) |
| Excellent (4/4) | 80 - 97 | -60 to -44 | 28 - 34 | -5.5 to -3 |
| Good (3/4) | 60 - 79 | -80 to -61 | 21 - 27 | -9 to -6 |
| Mid Cell (2/4) | 40 - 59 | -100 to -81 | 14 - 20 | -12.5 to -9.5 |
| Cell Edge (1/4) | 20 - 39 | -120 to -101 | 7 - 13 | -16 to -13 |
| Unstable (0/4) | 0 - 20 | -140 to -121 | 0 - 7 | -19.5 to -16.5 |

The actual value of your devices connection statistics is shown in the Lobar platform under "Device Properties".

For "**unstable**" network coverage Lobar can not guarantee the correct function of the cellular uplinks and battery runtimes under all conditions. Please consider a different location for the particular device.

Geo Location Lookup

There are multiple ways to trace where a mobile device is.

In General the following information is required and transmitted in the device status packets:

- TAC lac (dezimal), 0xcb20 = 52000
 - Tracking Area Code (TAC) sometimes called Location Area Code (LAC)
- CI cid (dezimal), 0x299A605 = 43623941
 - Cell ID (CID / CID)

Here are some resources to use:

LTE network error codes

Newer firmware of Lobar products report potential ESM (EPS Session Management) and EMM (EPS Mobility Management) errors in their status uploads.

Any other value received by the UE shall be treated as 0010 0010, "service option temporarily out of order". Any other value received by the network shall be treated as 0110 1111, "protocol error, unspecified".

NOTE 1: The listed cause values are defined in annex B.

NOTE 2: This value was allocated in earlier versions of this protocol, but there is no situation where this value can be used. If received by the network, it shall be treated as 0110 1111, "protocol error, unspecified".

NB-IoT network coverage

Please see: <https://iotcreators.com/network/?#G>

For testing the coverage you can use our hardware with our [USB Config Adapter](#) and the [Lobaro Maintenance Tool](#) to observe the log during connection.

Or test yourself using a professional 3rd party network tester e.g. from [ENQT](#).

Modem specifics (nRF9160)

Today Lobaro is using the Nordic nRF9160 in most of it's products. Beside that Lobaro Firmware the Modem Firmware from Nordic is running on a separate core.

NB-IoT / LTE-M Bands

Each Lobaro hardware only supports a subset of bands.

Operators might change bands without prior notice.

| Band | Uplink (TX) | Downlink (RX) | Bandwidth | Duplex-Mode | Used by |
|------|---------------|---------------|-----------|-------------|----------|
| B3 | 1710-1785 MHz | 1805-1880MHz | 75 MHz | | |
| B8 | 880 - 915 MHz | 925 - 960 MHz | 25 MHz | HD-FDD | Telekom |
| B20 | 832 - 862 MHz | 791 - 821 MHz | 30 MHz | HD-FDD | Vodafone |

The NB-IoT Bands selected for Europe are B3 (1800 MHz), B8 (900 MHz) and B20 (800 MHz). B8 and B20 are supported by all Lobaro devices, B3 might be available on recent variants too.

Known issues

Remote Update for Modem Firmware not possible (relevant until today)

The Lobaro Hardware does not support remote Modem Firmware updates. This might change in future but brings additional hardware requirements like external memory.

Modem Firmware < 1.3.0 does not support LTE-M and NB-IoT at the same time (relevant until 10/2022)

When enabling both LTE-M and NB-IoT in a Lobar Firmware that runs with Modem Firmware < 1.3.0 the Modem can not do a fallback to LTE-M when NB-IoT is not available and thus the firmware only uses NB-IoT in that case.

With Modem Firmware >= 1.3.0 a proper fallback is implemented.

nrf9160 SICA vs. SIBA (no LTE-M) (relevant until ~12/2021)

The nrf9160 SIBA only supports NB-IoT but not LTE-M. Since late 2021 Lobar only uses the nrf9160 SICA which supports both NB-IoT and LTE-M.
